

2007 Interdisciplinary Contest in Modeling Press Release—March 21, 2007

COMAP is pleased to announce the results of the 9th annual Interdisciplinary Contest in Modeling (ICM). This year, a record 273 teams representing institutions from five countries participated in the contest. Two teams were designated as **OUTSTANDING WINNERS**:

Duke University, Durham, NC
Princeton University, Princeton, NJ (INFORMS Prize)

This year's contest ran from Thursday, February 8 to Monday, February 12, 2007. During that time, teams of three students researched, analyzed, modeled, and communicated a solution to an open-ended interdisciplinary modeling problem. The 2007 ICM was primarily an on-line contest, where teams registered, obtained contest materials, and downloaded the problem statement and data at the prescribed time through COMAP's ICM Website.

This year's organ transplant problem was particularly challenging. It required teams to understand the science and management of organ transplantation and to model the policy issues associated with improving the efficiency of the US organ transplantation network. The problem contained many issues such as, medical, political, social, cultural, psychological, and ethical to be analyzed, and had several challenging requirements needing scientific and mathematical modeling and analysis.

This problem also had the ever-present requirements in the ICM to use thorough data analysis, creativity, approximation and precision, along with effective communication. The author of the problem was Paul Campbell, Beloit College. The problem originated from his interest in coordinating multiple transplants. The four Outstanding solution papers will be published in *The UMAP Journal*, along with commentaries from the problem author and judges. All the members of the 273 competing teams are to be congratulated for their excellent work and enthusiasm for scientific and mathematical modeling and interdisciplinary problem solving. This year's judges remarked that despite the challenging problem with myriad difficult tasks, the quality of the modeling, analysis, and presentation was high.

2007 ICM Statistics

- 273 teams participated
 - 2 high school teams (1%)
 - 36 U.S. Teams (13%)
 - 233 Foreign Teams (87%) from England, Finland, Indonesia, and P.R. China
 - 2 Outstanding Winners (1%)
 - 42 Meritorious Winners (16%)
 - 169 Honorable Mentions (61%)
 - 58 Successful Participants (21%)
-

ICM is associated with COMAP's Mathematical Contest in Modeling (MCM), which is held during the same weekend. ICM is designed to develop and advance interdisciplinary problem-solving skills in science, technology, engineering, mathematics (STEM), as well as competence in written communication. The first four interdisciplinary problems involved concepts from environmental science, environmental engineering, biology, chemistry, and/or resource management. The next three ICM problems involved operations research, information science, environmental science, and interdisciplinary issues in security and safety. This is the second contest problem involving public health. Each team is expected to have advisors and team members who represent a range of disciplinary interests in applied problem solving and modeling. Next year, the ICM problem will continue to involve modeling in the area of public health.

To obtain additional information about the ICM and to obtain a complete listing of all team designations, please visit the ICM Website at: www.comap.com/undergraduate/contests/icm, or contact John Tomicek, Contest Coordinator, at: MCM@comap.com.

Major start-up funding for the ICM was provided by a grant from the National Science Foundation (through Project INTERMATH) and COMAP. Additional support is provided by The Institute for Operations Research and the Management Sciences (INFORMS) and IBM. COMAP's Mathematical Contest in Modeling and Interdisciplinary Contest in Modeling are unique among modeling competitions in that they are the only international contests in which students work in teams to find a solution. Centering its educational philosophy on mathematical modeling, COMAP uses mathematical tools to explore real-world problems. It serves the educational community as well as the world of work by preparing students to become better informed—and prepared—citizens, consumers, workers, and community leaders.

Major funding provided by
The National Science Foundation

Administered by
The Consortium for Mathematics
and Its Applications

Contest Directors

Chris Arney, *U. S. Army Research Office, NC*
Joseph Myers, *United States Military Academy, NY*

Executive Director

Solomon A. Garfunkel, *COMAP, Inc., MA*

Associate Director

Richard Cassady, *University of Arkansas*
